mem 2

Moreo: $X \sim \text{Bin}(2, \theta)$, n = 128, $u_1 = \frac{\ln}{\ln 1}$, $u_2 = \frac{\ln}{\ln 1}$, $u_3 = \frac{\ln}{2}$.

Promper:

Theorems has ynother zhan. X runomizes a man gain.

Therefore:

1) $L(X; \theta) = (C_3 \cdot \theta^{\circ} \cdot (1 - \theta)^{\circ})^{\frac{1}{4}} \cdot (C_2 \cdot \theta^{\circ} \cdot (1 -$
